

Trigonometria

BASICS:

FORMULA FUNDAMENTAL

$$\text{Sen}^2 \alpha + \text{cos}^2 \alpha = 1$$

DA TRIGONOMETRIA

$$1 + \text{tg}^2 \alpha = \frac{1}{\text{cos}^2 \alpha}$$

$$\text{Tg} \alpha = \frac{\text{sen} \alpha}{\text{cos} \alpha}$$

SPECIAL ANGLES:

Radianos	$\frac{\pi}{6}$	$\frac{\pi}{4}$	$\frac{\pi}{3}$
graus	30	45	60
sen α	$\frac{1}{2}$	$\frac{\sqrt{2}}{2}$	$\frac{\sqrt{3}}{2}$
cos α	$\frac{\sqrt{3}}{2}$	$\frac{\sqrt{2}}{2}$	$\frac{1}{2}$
Tg α	$\frac{\sqrt{3}}{3}$	1	$\sqrt{3}$

$$\text{sen} \alpha = \frac{\text{e. opo.}}{\text{hip}}$$

$$\text{cos} \alpha = \frac{\text{e. adj.}}{\text{hip}}$$

$$\text{Tg} \alpha = \frac{\text{e. opo.}}{\text{e. adj.}}$$

Reduções ao 1º Quadrante

- Desenha α no 1º quadrante
- Desenha o ângulo pedido
- compara o sen / cos / Tg do ângulo pedido e α

$$\text{cos}(\pi - \alpha) = -\text{cos} \alpha$$

$$\text{sen}(\pi - \alpha) = \text{sen} \alpha$$

$$\text{sen}\left(\frac{\pi}{2} - \alpha\right) = \text{cos} \alpha$$

$$\text{cos}\left(\frac{\pi}{2} - \alpha\right) = \text{sen} \alpha$$

O Circulo Trigonométrico

$\text{Sen } \alpha$

$\text{cos } \alpha$

$\text{tg } \alpha$

Seno "le-x" no y
 coseno "le-x" no x
 tangente "le-x" em x=1

Equações Trigonométricas

$\therefore \text{Sen}(x) = b$

$x = \alpha + 2K\pi \vee x = \pi - \alpha + 2K\pi, K \in \mathbb{Z}$

$\therefore \text{Cos}(x) = b$

$x = \alpha + 2K\pi \vee x = -\alpha + 2K\pi, K \in \mathbb{Z}$

$\therefore \text{tg}(x) = b$

$x = \alpha + K\pi, K \in \mathbb{Z}$
